

SFN 826

Material: brass-plastic (black or red)

Processing: nichel-plated

Notes construction techniques and quality

25 mm drive axle for 4-4-2 Hiawatha locomotive. Gear of the most commonly used type with number of teeth $Z=26$ to be coupled to the SFN 793 worm in this catalogue. The axle is of the classic type with fixing bolts (included in the supply) and M 2 thread directly on the plastic, with classic reinforcement rings around the threaded hole. Available in the black or red version which must be specified in the order notes.
